

NorthFlow CFO Value Case (12-Month Outlook)

Conservative Scenario: 25% Realization of Identified Savings Opportunity

Metric	Value
Year 1 Cost	\$666,000
Annual Realized Benefit (25%)	\$2.9M
Net Benefit	\$2.234M
ROI	335%
Payback	~2.8 Months

Identified Annual Opportunity	Value
Avoided Regulatory Penalties	\$9.6M
Reduced Repeat Calls	\$1.5M
Reduced Transfer/Reopen Costs	\$0.5M
Total Opportunity	\$11.6M

Cost Assumptions: Build and implementation cost of \$510K. Operating cost of \$13K/month (\$156K/year). Total Year 1 Cost = \$666K.

Why Conservative? Rather than claiming the full \$11.6M opportunity, this case assumes NorthFlow captures only 25% of identified inefficiencies, generating approximately \$2.9M in annual benefit.

Key Risks: Adoption slower than expected, lower reduction in transfers/repeat calls, integration delays. Even below target realization, the largest value driver remains avoided regulatory penalties.

Sources

Northwind unit costs: \$2.4M quarterly regulatory penalty, \$7.40 inbound call, transferred complaint costs. Enterprise software cost benchmarks indicate many enterprise platforms fall in the \$250K-\$2M+ range, making a \$510K build estimate reasonable. Operating cost assumption: \$13K/month production infrastructure and support.
